McGill computer science student seeking a Summer 2027 software engineering internship.

Education

McGill University — Montreal, QC

BSc, Major in Artificial Intelligence & Computer Science, Minor in Music Technology — *2024 – June 2028 (expected)*

Experience

TVM: Student Television at McGill — Montreal, QC

Technical Director — *June 2026 – Present*

- Manage TVM's CAD $15,000 equipment budget and inventory for a 150-member student television service.
- Diagnosed server noise with IPMICFG and power-supply A/B tests and identified a 1 Gb/s NAS bottleneck.
- Lead student workshops on camera and audio workflows and advise campus productions on equipment and setup.

Assistant Technical Director — *Mar. – May 2026*

- Supported students with cameras, microphones and editing software, maintained equipment inventory and advised productions on gear selection.

Projects

Grailed Plus | *TypeScript, Node.js, ONNX Runtime* — 2026

- Extended an open-source resale tool into a published Chrome extension that compares Grailed, Depop and eBay listings. Added on-device image reranking in a Web Worker.
- Built an eBay gateway with OAuth token caching and parallel text/image search. Returned initial matches before image reranking and retained them if inference failed or timed out.

Discord Shoot Manager | *Node.js, discord.js, SQLite* — 2026

- Adapted EmailVerify into TVM membership and production workflows with administrator roster previews, atomic SQLite updates, role reconciliation and private shoot workspaces.
- Tested that a roster replacement advances the SQLite snapshot once when Discord fails to acknowledge it, and that the same confirmation cannot be reused.

Photo Node-Gallery | *Next.js, TypeScript, D3.js, Supabase, Cloudflare R2* — 2026

- Built a force-directed photo archive for browsing by colour. Compared five colour-similarity configurations on judged candidates for seven searches in a saved 100-photo archive.
- Added atomic graph registration and upload recovery. Tested rollback, stale updates and retries after lost responses, and served published images from R2 through a shared media Worker.

Elliot Mairet photography archive | *Next.js, TypeScript, Supabase, Cloudflare R2* — 2026

- Built a client photography archive with palette-based navigation and authenticated publishing, integrating image validation and colour extraction into uploads.
- Preserved the original publication payload when retrying after lost responses. Tested identical retry requests even when form values changed.

Additional Experience & Leadership

Retail Associate, Flying Colours Bermuda (May – July 2025). Handled sales, customer enquiries and stock.

Founder, F1 in Schools Club. Started a school STEM club and trained members in CAD, marketing and teamwork.

Technical Skills

Programming: TypeScript, JavaScript, Python, Java, C/C++, SQL, HTML/CSS
Web and ML: React, Next.js, Node.js, scikit-learn, ONNX Runtime, D3.js, Three.js, Tailwind CSS
Infrastructure: Supabase, PostgreSQL, Cloudflare R2, Docker, Coolify, Vercel, Git, HLS streaming
Media: OBS, Adobe Creative Suite, DaVinci Resolve, Ableton Live, Blender, AV troubleshooting
